

LED orientation lights

Price: starting at 10 EUR

Where to buy: In every electronic store; Do-it-yourself store; on the Internet.

Description: With the aid of LED orientation lights, paths in your own home (e.g. to the bathroom) can be illuminated. This is a simple way to avoid falls. LED orientation lights are available in various shapes and light colors. They are available as long luminous strips, as well as oval or rectangular lamps. Especially on staircases, LED orientation aids can ensure that the occupants of the house can step safely at night. The strips, which are available e.g. in Do-it-yourself stores, can be attached to many surfaces; the power is usually supplied directly via an electrical socket. Alternatively, they can also be connected to a motion detector.

Case description: Last autumn, Mrs. Adams fell off her stairs and broke her hand. In order to be able to reach the ground floor safely this year, even in the dark season, she plans to have LED orientation aids installed.
