

Wifi

Price: Free public networks are often available (in some cities, at airport, etc.). If you want Wifi at you home, you need to sign a contract with a provider and set up a router.

Description: Wifi offers the possibility of wireless access to the Internet. Electronic devices such as laptops, smartphones or video game consoles are connected to a so-called router or Wifi hotspot. The Wifi can also be used at home, for example, to conveniently access the Internet from the couch without cables. For domestic use, an appropriate contract must be concluded in advance with an Internet provider. Rates vary depending on speed and data volume.

Case description: Mr. West is sitting in a café and wants to reserve theatre tickets for tonight. To do this, Mr. West dials into the café's free Wifi network and reserves the tickets on the Internet.
